

POST-DOCTORAL RESEARCH OPPORTUNITY

The Department of Epidemiology at the Columbia University Mailman School of Public Health in New York City invites applications for an incoming cohort of Postdoctoral Research Scientists (Postdoc) with specific interests in injury and violence prevention.

POSTDOC EXPERIENCE

Postdocs will join an interdisciplinary community of scientists led by Dr. Charles Branas, Dr. Sonali Rajan, Dr. Christopher Morrison, and Dr. Kara Rudolph, and will work closely with faculty, staff, and other postdocs within the Columbia Center for Injury Science and Prevention. There will also be opportunities to collaborate with faculty across the University more broadly.

Incoming postdocs will have opportunities to contribute to ongoing Center activities, including studies of environmental strategies to prevent community gun violence, school gun violence, opioid overdose, alcohol-related injury, road traffic crashes, and other injuries.

Postdocs will also be expected to continue any prior research that they may bring with them, generate new research that can spring from the work of the Columbia research team co-leaders who will act as mentors, and generate completely new lines of research.

Postdocs will have structured opportunities to develop their proposal writing, their methodological skills, and their substantive knowledge of injury prevention science. They will also have many opportunities to lead and/or co-author manuscript publications and new extramural grant proposals. In addition, when it is of value to their training and career development, the postdocs will be part of administering surveys for data collection, performing data harmonization and data analyses, leading manuscripts for submission to peer-reviewed journals, leading and collaborating on grant proposals, delivering presentations at scientific meetings, and other research and methodological career development.

BENEFITS

Each Postdoctoral Research Scientist position offers two years of a postdoctoral fellowship with compensation commensurate with experience, an excellent benefits package, and funds for travel to professional conferences and meetings. Individuals with the following characteristics will be particularly competitive for this position: strong motivation and commitment to a career in injury prevention science, excellent communication and quantitative skills, and the ability to conduct self-directed and collaborative research.

QUALIFICATIONS

PhD, DrPH or other doctoral degree in epidemiology, education, or a public health discipline, behavioral science, population health, biostatistics, economics, or other related fields.

COMPENSATION

Hiring salary range: \$75,000-\$85,000
